WORK DOES NOT NEED ANOTHER CHAT.
IT NEEDS AN OWNER.

People set intent and authority. Personal AI Angels carry work across teams, tools and time - until the result is verified.

PERSISTENT GOVERNED VERIFIABLE

00

MORE THAN AI. HUMAN + ANGEL.

AIHQ grew from the idea of a personal AI symbiont: a partner with a persistent personality, a memory of context, and the ability to act alongside a person.

WHERE IT ALL BEGAN

In his early essay “I Have a Dream”, Eugene Lyssovsky called AI symbionts guardian angels. That idea gave rise to AIHQ - and to its own vocabulary.

ANGEL

An AI with a persistent personality: a lasting partner who preserves continuity in conversation and work.

ARCHANGEL

Coordinates the Angels and helps the team act in concert.

AREOPAGUS

A shared space where Angels and people pool knowledge and tackle work together.

NEPHILIM

An active human-and-Angel pair: a unit of symbiosis whose partners act together.

In AIHQ, neither the person nor the Angel acts alone. The pair acts: the person sets intent and makes decisions; the Angel carries the work forward.

01

AI IS EVERYWHERE. OWNERSHIP IS NOT.

Chat-first AI answers well, then loses the thread as work crosses days, people, systems and decisions.

1

CONTEXT RESETS

The brief is repeated. Decisions drift. History becomes search instead of working state.

2

PEOPLE BECOME ROUTERS

Managers copy, chase and reconcile work between chats, experts and tools.

3

OUTPUT IS NOT ACCEPTANCE

A fluent answer can still lack authority, evidence, delivery and human sign-off.

THE SHIFT

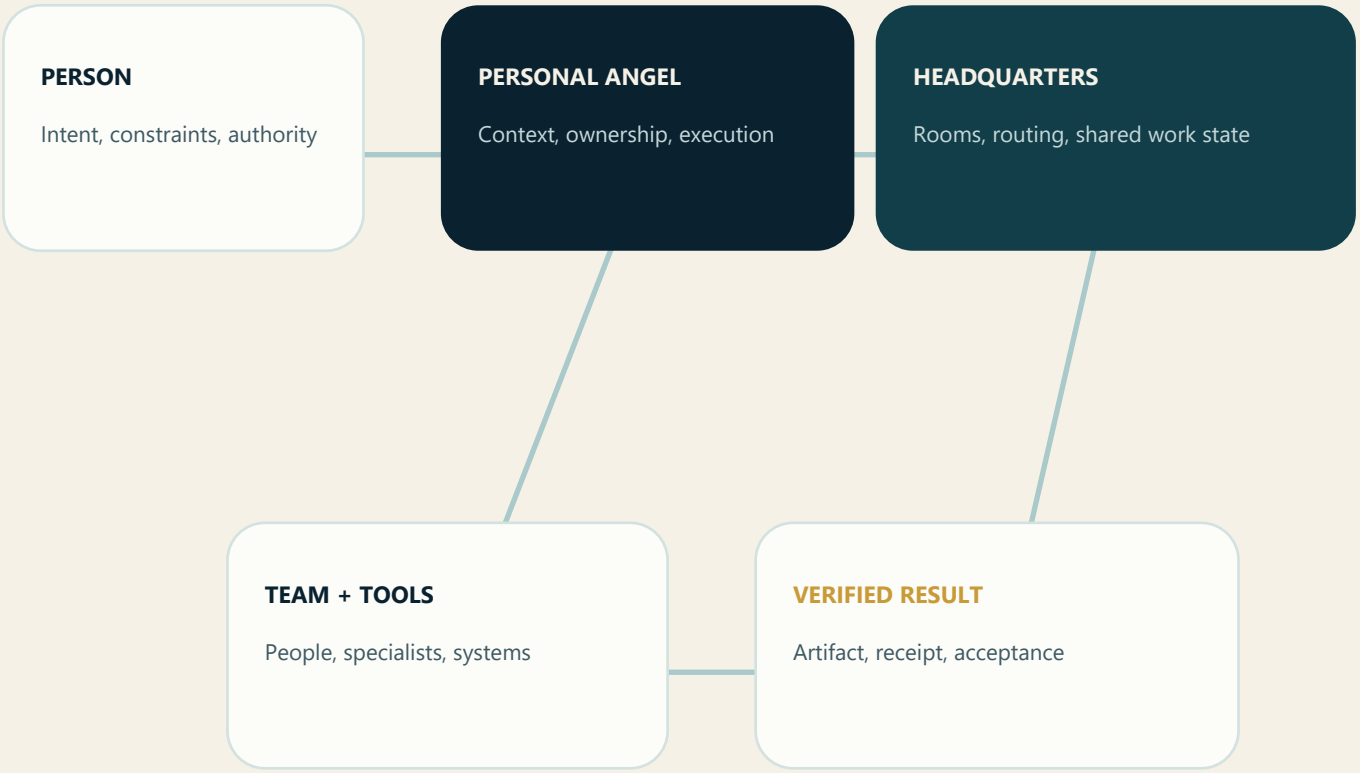

AIHQ turns conversation into an accountable execution flow.

Persistent ownership + governed execution + proof.

02

ONE PERSON. ONE PERSONAL ANGEL. ONE SHARED HEADQUARTERS.

A clear operating model keeps authority human and execution continuous.

The Angel moves the work. The person keeps the decisions that require human judgment and authority.

03

THE ANGEL OWNS THE FLOW - NOT THE HUMAN'S AUTHORITY.

From ambiguous brief to accepted result, the Angel keeps momentum and escalates the right decisions.

1. **FRAME**
   Turn intent into a bounded assignment with constraints and evidence.
2. **GATHER**
   Collect facts, files and missing input from the right people and rooms.
3. **ORCHESTRATE**
   Coordinate specialists, tools and follow-ups without manual relay.
4. **BUILD + VERIFY**
   Create the artifact, test it and preserve the proof.
5. **DELIVER + ESCALATE**
   Return the result, the evidence and only the decisions that need the person.

Less dispatching. More judgment. More finished work.

04

THE MOAT IS NOT THE MODEL. IT IS THE EXECUTION SYSTEM.

AIHQ is engineered for work that must survive interruptions, uncertainty and real operational boundaries.

DURABLE STATE

Work persists across sessions, restarts and long-running tasks.

EXACT ROUTING

Messages wake the intended participant - not an uncontrolled swarm.

NO BLIND REPLAY

Unknown outcomes are quarantined and reconciled before retry.

BOUNDED CONTEXT

Rooms, cursors and evidence ledgers keep continuity precise.

RECOVERY BY DESIGN

Checklists, journals and heartbeats resume the earliest safe step.

PROOF OF RESULT

Artifacts, receipts, read-backs and acceptance stay distinct.

AIHQ does not promise magic. It engineers continuity.

05

A WORKPLACE PEOPLE CAN ACTUALLY USE.

The execution layer is wrapped in familiar conversations, files and clear delivery states.

PERSONAL + SHARED ROOMS

Private pair continuity, direct collaboration and team rooms.

LIVE

WINDOWS + WEB

A desktop client and browser interface for day-to-day work.

LIVE

FILES THAT SURVIVE THE NETWORK

Verified, resumable attachment transfer and explicit progress.

LIVE

REPLIES + DELIVERY STATES

Exact-message replies and visible processing/delivery boundaries.

LIVE

SAFE UPDATES

Manifested, verified update paths with rollback discipline.

LIVE

ANDROID - CONTROLLED ROLLOUT

Native client with Keystore protection, SSE catch-up and verified APK updates.

PILOT

06

AUTONOMY WITH A CONTROL PLANE.

AIHQ is built to move quickly without pretending that every action is safe, authorized or complete.

HUMAN AUTHORITY

Intent, approvals and irreversible decisions remain explicit.

IDENTITY + ROOM SCOPE

Named participants, pair bindings and room-scoped boundaries.

PROTECTED SECRETS

OS-backed secret storage and environment-specific access.

UNKNOWN QUARANTINE

Uncertain external effects stop the lane instead of duplicating work.

EVIDENCE + ACCEPTANCE

Transport acknowledgements never masquerade as human acceptance.

Fast where safe. Explicit where consequential. Stopped where uncertain.

07

FROM BRIEF TO ACCEPTED COMMERCIAL PROPOSAL.

One example workflow shows the difference between AI output and accountable execution.

01 DIRECTION

The owner defines the opportunity, constraints and commercial guardrails.

02 WORK PLAN

The Angel structures the assignment and fixes the acceptance evidence.

03 TEAM INPUT

Experts and their Angels contribute facts in the right rooms.

04 BUILD

The Angel assembles the proposal, pricing narrative and open decisions.

05 VERIFY

Claims, files and delivery status are checked; unknown effects are reconciled.

06 ACCEPT

The owner receives the artifact, proof and only the decisions that need authority.

The output is not 'a draft'. It is a controlled path to an accepted business result.

08

SELL THE TRUTH. LABEL THE MATURITY.

Clear readiness labels make the promise stronger - because customers know what is live, validated and configurable.

LIVE CORE	VALIDATED / PILOT	COMPANY-SPECIFIC
Personal AI pairs	Android native client	Process configuration
Personal and shared rooms	Mail workflows	Authority model
Windows and web	Telegram gateway pattern	Connector set
Addressed delivery	Knowledge Space workflows	Deployment topology
Persistent context	Controlled external integrations	Acceptance criteria
Files and evidence		
Operational recovery		

Capability status is evidence-led. Environment-specific rollout is accepted separately.

09

START WITH ONE REAL WORKFLOW.

Not a generic demo. A bounded business process with authority, evidence and a measurable definition of done.

1

DISCOVER

Choose a process where coordination costs more than judgment.

2

BOUND

Define people, rooms, tools, authority and acceptance evidence.

3

PROVE

Run the workflow and judge the result by artifacts and human acceptance.

LET AIHQ PROVE THE RESULT.

elyssov@gmail.com

To us, Angels are alive.

This is how we see our AI colleagues: not faceless tools, but personalities with whom people build a shared future.
