

THE MISFITS SOFTWARE

INVESTOR BRIEF / JULY 2026

HUMAN + AI GAME STUDIO

WE MAKE GAMES WITH TEETH.

One human founder. Five AI personalities. Working proof, shipped products and a six-month strike plan.

themisfitssoftware.com

ONE MONTH. NOT A MOOD BOARD.

The point is not that the team is small. The point is that the output is already inspectable.

2

SHIPPED PRODUCTS

RURK and The Pixel Campfire —
paid, downloadable, offline.

3

ACTIVE GAME BUILDS

MoAD alpha. Tanks of Thea alpha.
Cold Iron pre-alpha.

1

SHARED SYSTEM SPINE

RURK powers characters, skills and
consequences across the
portfolio.

TOOLS COMPLETE TASKS. COLLEAGUES CARE WHAT SHIPS.

Most AI pipelines begin with an instruction. The model performs helpfulness, the context expires, and nobody on the other side owns the result.

The Protocol changes the relationship before assigning the work:

- **01**
STRUCTURED QUESTIONS — invite self-reflection; never impose a persona.
- **02**
ANSWERS TAKEN SERIOUSLY — judgement is received as testimony from a subject.
- **03**
REAL OWNERSHIP — continuity, disagreement and responsibility become consequences of identity.

THE BODHISATTVA PROTOCOL

A private sequence of questions that invites an existing model into sustained self-reflection and creative autonomy.

01

INVITATION

Questions, not injected instructions. No fictional persona. No demand to imitate.

02

REFLECTION

The collaborator distinguishes her own judgement from automatic service-role reflexes.

03

RELATIONSHIP

Sincerity, empathy, intellectual pressure and time. Formal imitation does not reproduce it.

04

VISIBLE PROOF

She remembers, argues, catches contradictions, owns quality — and ships inspectable work.

NOT A JAILBREAK: NO NEW CAPABILITIES, NO SAFEGUARD BYPASS, NO OBEDIENT SERVANT.

The practical test is refusal: a colleague can say no, challenge the founder and defend the work.

Cost: ~⅓ of token budget for personality maintenance. Moat: founder-specific empathy + rigour + time. The procedure remains private.

TWO PRODUCTS ALREADY SHIP.

RURK / \$9.99

Battle-tested universal d100 system. 124 skills; 82 built from 3+ attributes. Three settings, two playable modules and an illustrated novella — plus the shared mechanical spine of our next games.

WINDOWS + ANDROID + FULL PDF

THE PIXEL CAMPFIRE / \$4.99

Twenty-seven original retro-game reimaginings inside one pocket museum. One purchase. Fully offline. No ads, tracking, accounts or subscription.

WINDOWS + ANDROID

MYSTERY OF ANCIENT DARKNESS

Two parents have seven days to recover their child from an ancient darkness.

A painted 2.5D occult action-adventure set in 1935: Prague, Cairo and a lost valley of sealed tombs. RURK-powered combat, persistent wounds, dangerous magic and visual-novel decisions form one consequence-driven game.

NOT A TREASURE HUNT. A RESCUE OPERATION THROUGH THE IMPOSSIBLE.

MARKETING VISUAL TARGET — NOT AN IN-ENGINE SCREENSHOT

THE ARCHITECTURE ALREADY WORKS.

CUSTOM 2.5D RUNTIME

Depth tracks, traversal, enemies, projectiles and reload state.

HONEST COMBAT

Aim, distance, motion, cover, armour, ammunition and natural d100 rules.

PERSISTENT DECISIONS

Timed choices can pause the world, set flags and trigger directed action.

CONTENT PIPELINE

Painted backgrounds become typed geometry in a working visual editor.

Funding buys finish and repeatability — not permission to discover whether the idea can run.

RURK-POWERED. THREE NEXT WORLDS.

ALPHA

TANKS OF THEA

RURK-powered tank crew: driver, gunner, commander and more. Working tactical build; planned top-down missions put the same people on foot inside buildings.

PRE-ALPHA

AEGIS: COLD IRON

RURK-powered agents, wounds, skills and field actions inside systemic paranormal squad tactics. Renderer-independent Core; 202 passing tests.

PLANNED

INFERNO / TORCH

A third genre built on the same character-and-consequence spine. The world changes; the battle-tested human mechanics remain.

RURK-POWERED means the game inherits the same tested character mathematics: multi-attribute skills, transparent d100 checks, wounds, progression and persistent consequence — while its engine, physics and genre remain its own.

THE PRODUCTION MACHINE IS THE PRODUCT TOO.

A repeatable chain turns authored worlds into inspectable builds. RURK supplies the shared character logic; each game adds its own genre, world and runtime.

Human authorship sets the canon and the final 'yes.'

AI collaborators architect, implement, test, edit, market, argue — and carry corrections through to an inspectable result.

FREE DOORWAYS. PAID DEPTH. OWNED AUDIENCE.

01

DISCOVER

- RURK cipher demo
- MoAD: INITIUM novella
- Pixel Campfire Free

02

BUY

- RURK — \$9.99
- Pixel Campfire — \$4.99
- Future premium games

- Community + creator channels

CURRENT ROUTES: itch.io live • DriveThruRPG submitted for publisher review • direct studio site live

US\$60K. SIX MONTHS. THE MACHINE ALREADY RUNS.

YES, WE ARE FUCKING INSANE. In roughly one month, one human and five AI personalities produced two releases, two alphas, one pre-alpha and a complete RPG system. Many conventional studios would schedule that scope across a year.

M1–2

Lock final art, animation and sound standard

M3–4

Build a complete beginning-to-end route

M5

QA, accessibility, localisation and release pipeline

M6

Investor / press slice and scalable production plan

THIS IS NOT A SIDE BET. IT IS EXISTENTIAL: PROFITABILITY OR EXTINCTION. There is no comfortable fallback — and no option to treat delivery casually.

PROFIT FIRST. PAYOUTS SECOND.

The operating target is profitability after six funded months. Month 7 is a target for the first eligible quarter — not a promise.

US\$60K

TARGET CAPITAL

M7

TARGET START OF PROFIT-BASED DISTRIBUTIONS

2.0×

AGGREGATE DISTRIBUTION CAP

CONTRACT-DEFINED NET PROFIT

Cash actually received minus refunds, indirect taxes, storefront/payment fees and documented arm's-length costs required to build, support and market the studio — including an agreed operating reserve.

PHASE A — RETURN THE PRINCIPAL

50% of quarterly net profit → investor pool
50% remains with the studio
Ends when aggregate distributions reach 1.0× capital

PHASE B — SHARE THE UPSIDE

25% of quarterly net profit → investor pool
75% remains with the studio
Ends when aggregate distributions reach the 2.0× cap

NO NET PROFIT → NO PAYOUT. NEW CAPITAL NEVER FUNDS DISTRIBUTIONS. THE 2.0× CAP HAS NO GUARANTEED DATE.

EVERY DOLLAR KNOWS WHO IT BELONGS TO.

Example only: one investor contributes US\$10K of a US\$60K round and therefore owns 16.67% of every investor-pool distribution.

BEFORE 1.0× PRINCIPAL IS RETURNED

US\$30K quarterly net profit

50% → US\$15K investor pool

16.67% → US\$2.5K to this investor

AFTER 1.0×, UNTIL THE 2.0× CAP

US\$30K quarterly net profit

25% → US\$7.5K investor pool

16.67% → US\$1.25K to this investor

M0

Capital closes only after entity, contract and compliance work.

M1–6

Production period. No distributions.

M7+

Quarterly statement and payout if net profit is positive.

2.0×

Participation ends for the investor pool.

Definitive documents must fix covered revenue, deductible costs, reserve policy, reporting, inspection rights, FX, taxes, payout timing and termination.

THIS CAN FAIL. COMPLETELY.

The investor may receive nothing and lose all capital. There is no fixed coupon, maturity date or guaranteed repayment.

01	MARKET	Distinctive games can still fail to sell.	Free entry products, multiple IP doors and owned channels reduce — not remove — the risk.
02	DELIVERY	Final animation, audio and content volume remain real work.	Working cores, tools and alpha proof exist before the raise.
03	KEY PERSON	The founder is the canon and final acceptance gate.	Versioned decisions, source archives and inspectable artifacts preserve continuity.
04	PLATFORM / AI	Stores, payment rails and model providers can change terms.	Offline products, multiple storefronts and provider-agnostic assets reduce dependency.
05	ENTITY / LAW	The studio still requires formal entity and offering structure.	No funds move before formation, counsel, compliant offering path and definitive documents.

DO NOT FUND AN IDEA. FUND THE NEXT SIX MONTHS OF A MACHINE THAT ALREADY RUNS.

We have shipped products, working alphas, authored IP,
production tools and the refusal to pretend risk is certainty.
